

Terminal Services

Rail and road access to our UK and Pan-European Network

Multi-modal handling and transfer facilities

Storage and warehousing

Site management

Cost-effective logistics and supply chain solutions

DB Schenker Rail's terminals are the gateways to its European network.

Our multi-user freight services convey your cargo through our extensive network of inland terminals and distribution hubs. This network is continually being expanded to satisfy growing market demand. Our schedule includes daily services through the Channel Tunnel, linking Britain with destinations throughout continental Europe and beyond. DB Schenker Rail provides a full range of door-to-door logistics services for containerised and non-containerised goods including:

- Complete loading and haulage service
- Cargo handling
- Storage and warehousing
- Inventory and stock control management
- Transfer of cargo between different modes
- Supply chain design and management

Terminals are strategically located throughout the UK, including sites in London, such as Barking and Willesden, the Midlands, Manchester, Wakefield and Glasgow. By using our terminals to access the rail network you can reduce your carbon footprint and avoid congestion on the road network. Each train we operate produces on average five times less carbon emissions than the equivalent road transport, and saves up to 70 truck journeys.
